

This report summarises a screening result only. It is not a diagnosis and cannot confirm or rule out autism. If you have concerns, discuss them with a qualified health professional.

AI Screening Result

MOCK AI OUTPUT

The prototype AI screening flag was not raised for the submitted responses.

Mock similarity percentage: 24%

This mocked output is reserved for later replacement by the CNN model and is not used to calculate the conventional questionnaire score below.

Respondent and Session Details

Respondent age	24 years
Gender	Male
Ethnicity	White European
Jaundice	No
Family autism history	Yes
Test completed by	Family Member
Questionnaire used internally	AQ-10 (Adult)

Selected answer: Definitely Agree

Q10. I find it difficult to work out people's intentions

Selected answer: Definitely Agree

Classical Screening Result

AQ-10 score: 4 / 10

Referral threshold: 6

The conventional screening threshold was not met.

This score was calculated locally using the conventional scoring key for AQ-10 (Adult). It is separate from the mock AI screening result.

Formal Assessment Response

Assessment/diagnosis
response

No formal assessment

Final Disclaimer

This prototype is intended for research and screening support. The AI result is mocked and is separate from the locally calculated conventional questionnaire score. Neither result replaces a formal clinical assessment.

EAIP Model Input Preview (Temporary)

This appendix is included for integration testing. Q1-Q10 numeric encoding has not yet been confirmed from the supplied model documentation, so no numeric values have been guessed.

Q1	Definitely Agree model value: pending confirmation
Q2	Definitely Agree model value: pending confirmation
Q3	Definitely Agree model value: pending confirmation
Q4	Definitely Agree model value: pending confirmation
Q5	Definitely Agree model value: pending confirmation
